Multi-Voice Audio Playback

Laurel Pardue, Robert McIntyre

April 28, 2010

Progress

We've been working on getting a basic test of the system this last week. Everything works up to writing the output wav file to disk, which is a simple c++ issue we should have worked out in a day or so. Once this is complete, we'll have a complete audio processing chain that sends data through soft-cores that don't (yet) do anything but pass the data along, and we will hear music for the first time.
